Redden,Jerry L. Hatfield,Hermann Lotze-Campen,Anthony E. Hall,2011-10-25 A major task of our time is to ensure adequate food supplies for the world s current population now nearing 7 billion in a sustainable way while protecting the vital functions and biological diversity of the global environment The task of providing for a growing population is likely to be even more difficult in view of actual and potential changes in climatic conditions due to global warming and as the population continues to grow Current projections suggest that the world s temperatures will rise 1 8 4 0 by 2100 and population may reach 8 billion by the year 2025 and some 9 billion by mid century after which it may stabilize This book addresses these critical issues by presenting the science needed not only to understand climate change effects on crops but also to adapt current agricultural systems particularly in regard to genetics to the changing conditions Crop Adaptation to Climate Change covers a spectrum of issues related to both crops and climatic conditions The first two sections provide a foundation on the factors involved in climate stress assessing current climate change by region and covering crop physiological responses to these changes The third and final section contains chapters focused on specific crops and the current research to improve their genetic adaptation to climate change Written by an international team of authors Crop Adaptation to Climate Change is a timely look at the potentially serious consequences of climate change for our global food supply and is an essential resource for academics researchers and professionals in the fields of crop science agronomy plant physiology and molecular biology crop consultants and breeders as well as climate and food scientists

**Cereal Crops** Tariq Shah,Lixiao Nie,Marcelo Teixeira Filho,Rabia Amir,2023-06-21 Cereal Crops Genetic Resources and Breeding Techniques provides the reader practical tools for understanding relationships and challenges of successful farming improvements to genetic modifications and environmentally sound methods of production of bulk and quality cereals including wheat maize rice barley and millets It explores the trait mapping cropping systems genome engineering and identification of specific germplasms needed for the more effective development of biotic and abiotic stress resistant cereals

within the framework of ensuring future food supplies around the world Features Focuses on cropping systems genetics and genome engineering for higher crop production at a global level Features information on specific prebiotic formulas to ward off adverse effects of antibiotics Covers mechanistic as well as practical approaches for enhancing crop production in a sustainable way Includes further in depth analysis of various topics following each chapter This is a vital resource for researchers crop biologists and students working with crop production and climate changes that have a significant impact on crop production spanning basic to advanced level discussions of plant breeding molecular genetics and agronomy Covering mechanistic and practical approaches for enhancing crop production in a sustainable way this text is beneficial to intensive farmers and stakeholders in the field of crop production      *Advances in breeding techniques for cereal crops* Prof Frank Ordon, Prof. Wolfgang Friedt, 2019-06-28 Assesses performance of conventional techniques such as backcross and hybrid breeding in introducing new traits Maps current progress in methods to identify quantitative trait loci QTL linking phenotypic traits with genetic information for selection Shows comparative strengths and weaknesses of marker assisted selection MAS techniques such as genome wide association studies GWAS and nested association mapping NAM      **Plant Stress Tolerance Physiological & Molecular Strategies** A. Hemantaranjan, 2016-03-01 The book entitled Plant Stress Tolerance Physiological hence a brief focus on sustainability has been remarkably presented to prove the meaningfulness of this publication This book brings ingenious applied researches highlighting the major environmental factors coupled with scrupulous strategies in solving abiotic stresses in varied micro and macro agro climatic conditions in general and unfolding the basis for tolerance mechanisms in plant systems in particular      **Physiological breeding I: interdisciplinary approaches to improve crop adaptation ,      Molecular Breeding in Wheat, Maize and Sorghum** Mohammad Anwar Hossain, Mobashwer Alam, Saman Seneweera, Sujay Rakshit, Robert J. Henry, 2021-06-30 The global population is projected to reach almost 10 billion by 2050 and food and feed production will need to increase by 70% Wheat maize and sorghum are three key cereals which provide nutrition for the majority of the world s population Their production is affected by various abiotic stresses which cause significant yield losses The effects of climate change also increase the frequency and severity of such abiotic stresses Molecular breeding technologies offer real hope for improving crop yields Although significant progress has been made over the last few years there is still a need to bridge the large gap between yields in the most favorable and most stressful conditions      *Genetics of drought tolerance in cereals* Dr Ambra Viviani, Prof. Roberto Tuberosa, Dr Marco Maccaferri, 2024-01-08 This chapter discusses some of the latest findings related to the genetics of drought resistance of the world s most widely grown cereals The chapter starts with rice because of its key role as an ancestral founder species and phylogenetically pivotal role for cereal evolution The chapter then reviews barley second in phylogeny after rice durum wheat bread wheat sorghum and maize      **Multiple abiotic stresses: Molecular, physiological, and genetic responses and adaptations in cereals** Sindhu Sareen, Nabin Bhusal, Ranjeet Ranjan Kumar, Pradeep Sharma, 2023-04-05      **Scale**

**and Complexity in Plant Systems Research** J.H.J. Spiertz, P.C. Struik, H.H. van Laar, 2007-04-24 New directions in plant systems research are presented and discussed in this book The book offers new insights in physiology and genetics of crop adaptation for wheat and maize along with innovative approaches in architectural and physiology based modelling of crop functioning An outlook and dialogue on future directions in plant system research challenges readers with contrasting opinions on the way forward

*Developing Drought-Resistant Cereals* Roberto Tuberosa, 2022-09-27 Drought remains the biggest single threat from climate change to the production of key cereal crops such as wheat and barley Cereals also respond in complex ways to drought stress making improved drought tolerance a challenging trait to achieve With many cereals recognised as staple food crops due to their nutritional value more research is required into improving drought tolerance as a means of ensuring the future food security of millions *Developing drought resistant cereals* reviews the wealth of research which addresses how to overcome this challenge in order to mitigate climate change effects in cereal production This collection details our understanding of the mechanisms of drought tolerance as well as the development of techniques for improving resistance including phenotyping genome wide association studies GWAS and genome editing
