

INTRODUCTION

The PC4010 is a highly flexible and versatile control which will enable the installer to meet the most demanding security requirements. The heart of the system is the main control panel, designated the PC4010, which is connected to other system elements using common 4 conductor unshielded station wire. The main panel processes signal information and communicating with the monitoring station. The main panel is capable of supervising 8 zones, any of which may be defined for fire or burglary applications and also manages up to 4 separate and fully independent partitions, assigning zones and their controlling keypads in accordance with installer programming.

The basic 8 zone capability of the PC4010 can be expanded using either PC4108, PC4116 or PC4164 modules which provide 8, 16 or 64 zones of additional inputs respectively up to a system maximum of 64 zones. The PC4108 and PC4116 are designed for use within any of the cabinets and are shipped as PC boards only. The PC4164 is designed to be placed inside the supplied cabinet.

Programming and system operation are carried out using the LCD4500 liquid crystal display keypad. The LCD4500 connects at any point in the system to the four wire communication bus or "Combus", its specific identification being determined automatically in the process of installing it. A maximum of 8 LCD4500 keypads may be used on any one system regardless of size.

The PC4204 relay output module is available for installations requiring additional power beyond the 500 mA supplied by the PC4010 main panel. This module comprises a 12 volt DC power supply of 1.5 Amp capacity and four 12 volt relays with form C contacts which will provide switched outputs under any of the 35 options available in the list of programmable outputs. The PC4204 connects to the Combus via four wires as with other system elements. It requires a 16-18 volt, 40 VA transformer and a 12 volt battery. Up to 12 PC4204 modules may be installed on any one system. The PC4204 is shipped as a PC board only.

The use of any power source other than a PC4204 to repower the Combus will result in a system malfunction.

The PC4216 low current module provides 16 separate outputs. Each output may be programmed to operate under the control of 1 of 35 options as listed in the programmable options section of the installation manual. Up to 8 other PC4216's may be used to provide outputs for graphic annunciator or similar devices for the maximum of 64 zones. The PC4216 connects to the Combus with four wires. A maximum of 9 PC4216's may be connected to a system. The PC4216 may be installed in the main cabinet or in other cabinet options and is shipped as a board only.

The PC4010 includes the capability of driving a serial printer using a PC4400 serial interface module. The PC4400 connects to the Combus with four wires. The printer may be located up to 200 feet (60 meters) away from the module. The PC4010 is also capable of communicating to a DVAC network using the PC4400 serial interface module. The PC4400 is shipped as a board only.
