

# What Is dTMS?

Deep transcranial magnetic stimulation (dTMS) is a relatively safe, non-invasive procedure in which a coil that carries an electric current is placed against the head, producing a magnetic field that penetrates the scalp, skull, and cerebrospinal fluid (CSF) and stimulates neurons in the brain to activate (i.e., fire). Stimulating groups of neurons in specific brain areas, like the left prefrontal cortex, is believed to activate neural circuits thought to be impaired in mental health disorders, such as depression and obsessive-compulsive disorder (OCD).
