Soares, Neville A. Stanton, 2011-06-22 Every day we interact with thousands of consumer products We not only expect them

to perform their functions safely reliably and efficiently but also to do it so seamlessly that we don't even think about it. However, with the many factors involved in consumer product design from the application of human factors and ergonomics principles to reducing risks of malfunction and the total life cycle cost, the process just seems to get more complex. Edited by well-known and well-respected experts, the two volumes of *Handbook of Human Factors and Ergonomics in Consumer Product Design* simplify this process. The second volume, *Human Factors and Ergonomics in Consumer Product Design: Uses and Applications*, discusses challenges and opportunities in the design for product safety and focuses on the critical aspects of human-centered design for usability. The book contains 14 carefully selected case studies that demonstrate application of a variety of innovative approaches that incorporate Human Factors and Ergonomics (HF/E) principles, standards, and best practices of user-centered design, cognitive psychology, participatory macro ergonomics, and mathematical modeling. These case studies also identify many unique aspects of new product development projects which have adopted a user-centered design paradigm as a way to attend to user requirements. The case studies illustrate how incorporating HF/E principles and knowledge in the design of consumer products can improve levels of user satisfaction, efficiency of use, increase comfort, and assure safety under normal use as well as foreseeable misuse of the product. The book provides a comprehensive source of information regarding new methods, techniques, and software applications for consumer product design.

Cooper,Christine Yager,Susan T. Chrysler,2011 Previous research using driving simulation crash data and naturalistic methods has begun to shed light on the dangers of texting while driving Perhaps because of the dangers no published work has experimentally investigated the dangers of texting while driving using an actual vehicle Additionally previous research does not clearly differentiate the dangers associated with reading and writing text messages To address these issues 42 participants drove an instrumented research vehicle on a closed driving course Participants drove under a control text reading and text writing condition Baseline text reading and writing data were also collected outside of the research vehicle Results indicated that impairment associated with texting while driving may be greater than previously thought Principally when reading or writing texts drivers exhibited reductions in reaction time that were nearly twice as great as previously thought Drivers also exhibited nearly identical impairment in the reading and writing conditions suggesting that both reading and writing text messages may be equally dangerous These results have immediate implications for improving our understanding of the dangers of texting while driving and may be useful for future public policy discussions     **Compendium of Student Papers** ,2008     **Driver Distraction** Katie J. Regan,John D. Lee,Trent W. Victor,2017-07-12 It is estimated that in the United States around 20 percent of all Police reported road crashes involve driver distraction as a contributing factor This figure increases if other forms of inattention are considered Evidence reviewed in this volume suggests that the situation is similar in other countries and that driver distraction and inattention are even more dangerous as contributing factors in crashes

than drug and alcohol intoxication Having a solid evidence base from which to develop injury countermeasures is a cornerstone of road safety management This book adds to the accumulating evidence base on driver distraction and inattention With 24 chapters by 52 authors from more than 10 countries it provides important new perspectives on the definition and meaning of driver distraction and inattention the mechanisms that characterize them the measurement of their effects strategies for mitigating their effects and recommendations for further research The goal of this book is to inspire further research and countermeasure development to prevent and mitigate the potentially adverse effects of driver distraction and driver inattention and in doing so to save lives The Effects of Driver Distraction on Simulated Driving

Relating Experimental Drive Distraction and Driving Performance Metrics to Crash Involvement - Definitions of Terms and Concepts Driver Metrics, Performance, Behaviors and States Committee,2018 This Information Report provides functional definitions and discussions of key terms and concepts for relating the experimental evaluation of driver distraction to real world crash involvement Examples of driver distraction and driving performance metrics include those related to vehicle control object and event detection and response OEDR physiological indicators subjective assessments or combinations thereof Examples of real world crash involvement metrics include the epidemiological effect size measures of risk ratio rate ratio and odds ratio The terms and concepts defined in this document are not intended to contribute to methodologies for assessing the individual metrics within a domain these are covered in other SAE documents e g SAE J2944 and SAE technical reports For any measure chosen in one domain or the other the goal is to give general definitions of key terms and concepts that relate metrics in one domain to those in the other Issues of repeatability and validity are discussed in relation to these methods and metrics for relating the two domains However the actual specification of a particular methodology for predicting crash involvement from experimental studies is outside the scope of the present document This informational report applies to all motorized on road road vehicles including passenger cars trucks buses and powered two wheelers Driver distraction may be related to any activity that competes with the driving task and diverts attention away from activities critical for safe driving Note that the terms and concepts described herein may also be general enough to suggest methods to estimate crash involvement of real world automated vehicles from simulation metrics The intended users of the document are practitioners and researchers in the industry academia and other organizations with interest in driver

distraction and driving performance assessment and road safety Driver distraction is one of the key factors underlying road crashes refer to Ascone et al 2009 NHTSA 2009 2017 and thus is a major focus for policymaking and human vehicle interface design There are many existing metrics and procedures for the experimental evaluation of driver distraction several of which have been specified in international standards and or regional guidelines e g ISO 15007 1 ISO TS 15007 2 ISO 16673 ISO 26022 ISO 17488 and SAE J2944 However it cannot be simply assumed that the effects of distraction on driving performance or driver behavior state measured with these procedures are directly indicative of real world crash involvement Thus there is a need for approaches that can be used to systematically relate experimentally measured effects of driver distraction on driving performance and driver behavior state to real world crash involvement This document provides a set of concepts and definitions of terms that can be used to characterize this relation
