**DSDM, Dynamic Systems Development Method** Jennifer Stapleton, 1997 DSDM is about people not tools It is about truly understanding the needs of a business delivering software solutions that work and delivering them as quickly and as cheaply as possible The Dynamic Systems Development Method provides a framework of controls and best practice for Rapid Application Development It was created by a consortium of organisations and it has been proved since its publication in January 1995 to be extremely effective in delivering maintainable systems which match the needs of the business better than those produced using traditional lifecycles This book commissioned by the DSDM Consortium and written by the chairman of the Technical Committee which developed the method explores the day to day realities of implementing the method It is a practitioner's guide dealing with issues such as how to get people from different disciplines to work together as a team how to gain commitment and how to manage projects within normal business constraints In this book you will find practical guidelines on the implementation of key elements of the method such as timeboxes and the MOSCOW Rules clear recommendations for the roles and responsibilities of the members of the development team advice on which type of application is most likely to benefit from the method eight lengthy case studies by well known companies providing a benchmark against which to assess the suitability of candidate projects numerous examples and anecdotes enabling the reader to benefit from the author's experience putting the method into practice Do you want to cut the development time and increase the fitness for use of screen based business applications by orders of magnitude This book will enable those in organisations which develop or purchase tailored IT systems to gain a clear understanding of the benefits of the incremental and iterative approach embodied in the DSDM 0201178893B04062001 *Realigning Research and Practice in Information Systems Development* Nancy L. Russo, Brian Fitzgerald, Janice I. DeGross, 2013-06-29 Given the pervasive nature of information technology and information systems in the modern world the design and development of IS and IT are critical issues of concern New research topics continuously emerge in tandem with the latest developments in technology E Business Knowledge Management Business Process Reengineering for example However when the initial flurry of research abates and the gloss of these areas has diminished somewhat as it inevitably does the enduring core issue remains as to how to develop systems to fully exploit these new areas Both information systems and information technology are interpreted fairly broadly in this book Of particular interest to the editors were research studies that facilitate an understanding of the role and impact of information technology on society organizations and individuals and which strive to improve the design and use of information systems in that context The contributions to the book are categorized into four broad themes First is the core issue of developing information systems in the current environment In this section several fundamental challenges to current assumptions and conventional wisdom in information systems development are posed The second section considers the management of information systems Again the conventional wisdom is challenged The penultimate section focuses on

researching information systems Here various issues to do with research methods are surfaced and the use of leading edge research methods in information systems development is pioneered and discussed Finally a section is devoted to understanding information systems This section addresses the perennial challenge in the IS field in relation to the conceptual foundations of the field This volume comprises the proceedings of the Working Conference on Realigning Research and Practice in Information Systems Development The Social and Organizational Perspective which was sponsored by the International Federation for Information Processing IFIP and held in Boise Idaho USA in July 2001 Given the central importance of information systems development in the current age this eclectic book which considers the topic from a rich and varied set of perspectives will be essential reading for researchers and practitioners working in all areas of IS and IT

**Software Quality** Martin Wieczorek, Dirk Meyerhoff, 2011-06-28 1 1 The Pressure on Information Technology IT In today's environment the ability to react quickly to change by reducing the development life cycle in order to be first to market will give a company an important competitive edge James Martin The market conditions of the 21st century put business under continual pressure The most successful companies are those who are able to reduce their time to market to launch initiatives before their competitors to respond very rapidly to opportunities in the marketplace or to change direction in response to a move by the competition or a change in circumstances All of these business initiatives rely on support from Information Technology IT For a business to launch a new product in three months time the supporting IT processes must be available and working in that three month time frame In this fast moving environment late IT delivery is not acceptable and may pose a major risk to the business The marketplace of 21st century business measures timescales in months whereas in the past timescales of two to three years were more typical Internet related and e business projects frequently require even tighter timescales measured in days rather than months This need for speed puts tremendous pressure on IT departments Pressure does not just come from the need for speed There is also an ever increasing rate of change within business
