

Inspecting the camshafts

Check the cam contact surfaces for scratches, grooves, steps and waving. Worn cams are frequently the cause of poor timing, which leads to loss of engine power.

Install the camshaft between two centres and check for distortion using a dial gauge:

- service limit:

0.1 mm.

Notes

The effective distortion will be half the total reading obtained on the dial gauge.

Each camshaft is stamped with an identification letter:

O: horizontal;

V: vertical.

Checking the oil seals

Fit new oil seals at each engine overhaul.

Insert the new oil seals squarely in their bores. Use suitable drifts.

Lubricate the lip of oil seals after assembly. This operation must be performed very carefully.
