Here moon s semidiameter 16 4000 57 16 r 400 16 1123 miles 2 The sun s horizontal parallax being 88 and his angular diameter 32V find his diameter in miles Am 872 727 miles 3 The synodic period of Venus being 584 days find the angle gained in each minute of time on the earth round the sun as centre Am l 54 per minute 4 Find the angular velocity with which Venus crosses the sun s disc assuming the distances of Venus and the earth from the sun are as 7 to 10 as given by Bode s Law Since fig 50 S V VA 7 3 But Srhas a relative angular velocity round the sun of 1 54 per minute see Example 3 therefore the relative angular velocity of A V round A is greater than this in the ratio of 7 3 which gives an approximate result of 3 6 per minute the true rate being about 4 per minute Annual ParaUax 95 We have already seen that no displacement of the observer due to a change of position on the earth's surface could apparently affect the direction of a fixed star However as the earth in its annual motion describes an orbit of about 92 million miles radius round the sun the different positions in space from which an observer Diophantus of Alexandria Thomas L. views the fixed stars from time to time throughout the year must be separated Heath, 1910 Diophantus of Alexandria Sir Thomas Little Heath, 1910 **Diophantus of Alexandria** Sir Thomas Little Heath, 1978 **DIOPHANTUS OF ALEXANDRIA** THOMAS L. HEATH, 2018 Diophantus of Alexandria Thomas L. Heath, 2017-09-17 Excerpt from Diophantus of Alexandria A Study in the History of Greek Algebra Diophantus appeared in 1885 and has long been out of print Inquiries made for it at different times suggested to me that it was a pity that a treatise so unique and in many respects so attractive as the Aritkmetz ca should once more have become practically inaccessible to the English reader At the same time I could not but recognise that after twenty five years in which so much has been done for the history of mathematics the book needed to be brought up to date Some matters which in 1885 were still subject of

controversy such as the date of Diophantus may be regarded as settled and some points which then had to be laboured can now be dismissed more brie y Practically the whole of the Introduction except the chapters on the editions of Diophantus his methods of solution and the porisms and other assumptions found in his work has been entirely rewritten and much shortened while the chapters on the methods and on the porisms etc have been made fuller than before The new text of Tannery teubner 1893 1895 has enabled a number of obscure passages particularly in books v and VI to be cleared up and as a basis for a reproduction of the whole work is much superior to the text of Bachet I have taken the opportunity to make my version of the actual treatise somewhat fuller and somewhat closer to the language of the original In other respects also I thought I could improve upon a youthful work which was my first essay in the history of Greek mathematics When writing it I was solely concerned to make Diophantus himself known to mathematicians About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www forgottenbooks com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
