Discourse Processing Manfred Stede:

   Discourse Processing Manfred Stede,2011-11-11 Discourse Processing here is framed as marking up a text with structural descriptions on several levels which can serve to support many language processing or text mining tasks We first explore some ways of assigning structure on the document level the logical document structure as determined by the layout of the text its genre specific content structure and its breakdown into topical segments Then the focus moves to phenomena of local coherence We introduce the problem of coreference and look at methods for building chains of coreferring entities in the text Next the notion of coherence relation is introduced as the second important factor of local coherence We study the role of connectives and other means of signaling such relations in text and then return to the level of larger textual units where tree or graph structures can be ascribed by recursively assigning coherence relations Taken together these descriptions can inform text summarization information extraction discourse aware sentiment analysis question answering and the like Table of Contents Introduction Large Discourse Units and Topics Coreference Resolution Small Discourse Units and Coherence Relations Summary Text Structure on Multiple Interacting Levels   **Argumentation Mining** Manfred Stede,Jodi Schneider,2018-12-20 Argumentation mining is an application of natural language processing NLP that emerged a few years ago and has recently enjoyed considerable popularity as demonstrated by a series of international workshops and by a rising number of publications at the major conferences and journals of the field Its goals are to identify argumentation in text or dialogue to construct representations of the constellation of claims supporting and attacking moves in different levels of detail and to characterize the patterns of reasoning that appear to license the argumentation Furthermore recent work also addresses the difficult tasks of evaluating the persuasiveness and quality of arguments Some of the linguistic genres that are being studied include legal text student essays political discourse and debate newspaper editorials scientific writing and others The book starts with a discussion of the linguistic perspective characteristics of argumentative language and their relationship to certain other notions such as subjectivity Besides the connection to linguistics argumentation has for a long time been a topic in Artificial Intelligence where the focus is on devising adequate representations and reasoning formalisms that capture the properties of argumentative exchange It is generally very difficult to connect the two realms of reasoning and text analysis but we are convinced that it should be attempted in the long term and therefore we also touch upon some fundamentals of reasoning approaches Then the book turns to its focus the computational side of mining argumentation in text We first introduce a number of annotated corpora that have been used in the research From the NLP perspective argumentation mining shares subtasks with research fields such as subjectivity and sentiment analysis semantic relation extraction and discourse parsing Therefore many technical approaches are being borrowed from those and other fields We break argumentation mining into a series of subtasks starting with the preparatory steps of classifying text as argumentative or not and segmenting it into elementary units Then central steps are the automatic identification of claims and finding

statements that support or oppose the claim For certain applications it is also of interest to compute a full structure of an argumentative constellation of statements Next we discuss a few steps that try to dig deeper to infer the underlying reasoning pattern for a textual argument to reconstruct unstated premises so called enthymemes and to evaluate the quality of the argumentation We also take a brief look at the other side of mining i e the generation or synthesis of argumentative text The book finishes with a summary of the argumentation mining tasks a sketch of potential applications and a necessarily subjective outlook for the field **Automatic Detection of Verbal Deception** Eileen Fitzpatrick,Joan Bachenko,Tommaso Fornaciari,2022-05-31 The attempt to spot deception through its correlates in human behavior has a long history Until recently these efforts have concentrated on identifying individual cues that might occur with deception However with the advent of computational means to analyze language and other human behavior we now have the ability to determine whether there are consistent clusters of differences in behavior that might be associated with a false statement as opposed to a true one While its focus is on verbal behavior this book describes a range of behaviors physiological gestural as well as verbal that have been proposed as indicators of deception An overview of the primary psychological and cognitive theories that have been offered as explanations of deceptive behaviors gives context for the description of specific behaviors The book also addresses the differences between data collected in a laboratory and real world data with respect to the emotional and cognitive state of the liar It discusses sources of real world data and problematic issues in its collection and identifies the primary areas in which applied studies based on real world data are critical including police security border crossing customs and asylum interviews congressional hearings financial reporting legal depositions human resource evaluation predatory communications that include Internet scams identity theft and fraud and false product reviews Having established the background this book concentrates on computational analyses of deceptive verbal behavior that have enabled the field of deception studies to move from individual cues to overall differences in behavior The computational work is organized around the features used for classification from gram through syntax to predicate argument and rhetorical structure The book concludes with a set of open questions that the computational work has generated **Argumentation Mining** Manfred Stede,Jodi Schneider,2022-06-01 Argumentation mining is an application of natural language processing NLP that emerged a few years ago and has recently enjoyed considerable popularity as demonstrated by a series of international workshops and by a rising number of publications at the major conferences and journals of the field Its goals are to identify argumentation in text or dialogue to construct representations of the constellation of claims supporting and attacking moves in different levels of detail and to characterize the patterns of reasoning that appear to license the argumentation Furthermore recent work also addresses the difficult tasks of evaluating the persuasiveness and quality of arguments Some of the linguistic genres that are being studied include legal text student essays political discourse and debate newspaper editorials scientific writing and others The book starts with a discussion of the linguistic perspective characteristics of argumentative language and their

relationship to certain other notions such as subjectivity Besides the connection to linguistics argumentation has for a long time been a topic in Artificial Intelligence where the focus is on devising adequate representations and reasoning formalisms that capture the properties of argumentative exchange It is generally very difficult to connect the two realms of reasoning and text analysis but we are convinced that it should be attempted in the long term and therefore we also touch upon some fundamentals of reasoning approaches Then the book turns to its focus the computational side of mining argumentation in text We first introduce a number of annotated corpora that have been used in the research From the NLP perspective argumentation mining shares subtasks with research fields such as subjectivity and sentiment analysis semantic relation extraction and discourse parsing Therefore many technical approaches are being borrowed from those and other fields We break argumentation mining into a series of subtasks starting with the preparatory steps of classifying text as argumentative or not and segmenting it into elementary units Then central steps are the automatic identification of claims and finding statements that support or oppose the claim For certain applications it is also of interest to compute a full structure of an argumentative constellation of statements Next we discuss a few steps that try to dig deeper to infer the underlying reasoning pattern for a textual argument to reconstruct unstated premises so called enthymemes and to evaluate the quality of the argumentation We also take a brief look at the other side of mining i e the generation or synthesis of argumentative text The book finishes with a summary of the argumentation mining tasks a sketch of potential applications and a necessarily subjective outlook for the field *Semantic Similarity from Natural Language and Ontology Analysis* Sébastien Harispe,Sylvie Ranwez,Stefan Janaqi,2015-05-01 Artificial Intelligence federates numerous scientific fields in the aim of developing machines able to assist human operators performing complex treatments most of which demand high cognitive skills e g learning or decision processes Central to this quest is to give machines the ability to estimate the likeness or similarity between things in the way human beings estimate the similarity between stimuli In this context this book focuses on semantic measures approaches designed for comparing semantic entities such as units of language e g words sentences or concepts and instances defined into knowledge bases The aim of these measures is to assess the similarity or relatedness of such semantic entities by taking into account their semantics i e their meaning intuitively the words tea and coffee which both refer to stimulating beverage will be estimated to be more semantically similar than the words toffee confection and coffee despite that the last pair has a higher syntactic similarity The two state of the art approaches for estimating and quantifying semantic similarities relatedness of semantic entities are presented in detail the first one relies on corpora analysis and is based on Natural Language Processing techniques and semantic models while the second is based on more or less formal computer readable and workable forms of knowledge such as semantic networks thesauri or ontologies Semantic measures are widely used today to compare units of language concepts instances or even resources indexed by them e g documents genes They are central elements of a large variety of Natural Language Processing applications and knowledge

based treatments and have therefore naturally been subject to intensive and interdisciplinary research efforts during last decades Beyond a simple inventory and categorization of existing measures the aim of this monograph is to convey novices as well as researchers of these domains toward a better understanding of semantic similarity estimation and more generally semantic measures To this end we propose an in depth characterization of existing proposals by discussing their features the assumptions on which they are based and empirical results regarding their performance in particular applications By answering these questions and by providing a detailed discussion on the foundations of semantic measures our aim is to give the reader key knowledge required to i select the more relevant methods according to a particular usage context ii understand the challenges offered to this field of study iii distinguish room of improvements for state of the art approaches and iv stimulate creativity toward the development of new approaches In this aim several definitions theoretical and practical details as well as concrete applications are presented **'Subordination' versus 'Coordination' in Sentence and Text** Cathrine Fabricius-Hansen,Wiebke Ramm,2008-05-21 The papers collected in this volume including a comprehensive introduction investigate semantic and discourse related aspects of subordination and coordination in particular the relationship between subordination coordination at the sentence level and subordination coordination or hierarchical non hierarchical organization at the discourse level The contributions in part I are concerned with central theoretical questions part II consists of corpus based cross linguistic studies of clause combining and discourse structure involving at least two of the languages English German Dutch French and Norwegian part III contains papers addressing specific predominantly semantic topics relating to German English or French and the papers in part IV approach the topic of subordination coordination and rhetorical relations from a diachronic Old Indic and Early Germanic perspective The book aims to contribute to a better understanding of information packaging on the sentence and text level related within a particular language as well as cross linguistically Quality Estimation for Machine Translation Lucia Specia,Carolina Scarton,Gustavo Henrique Paetzold,2022-05-31 Many applications within natural language processing involve performing text to text transformations i e given a text in natural language as input systems are required to produce a version of this text e g a translation also in natural language as output Automatically evaluating the output of such systems is an important component in developing text to text applications Two approaches have been proposed for this problem i to compare the system outputs against one or more reference outputs using string matching based evaluation metrics and ii to build models based on human feedback to predict the quality of system outputs without reference texts Despite their popularity reference based evaluation metrics are faced with the challenge that multiple good and bad quality outputs can be produced by text to text approaches for the same input This variation is very hard to capture even with multiple reference texts In addition reference based metrics cannot be used inproduction e g online machine translation systems when systems are expected to produce outputs for any unseen input In this book we focus on the second set of metrics so called Quality Estimation QE

metrics where the goal is to provide an estimate on how good or reliable the texts produced by an application are without access to gold standard outputs QE enables different types of evaluation that can target different types of users and applications Machine learning techniques are used to build QE models with various types of quality labels and explicit features or learnt representations which can then predict the quality of unseen system outputs This book describes the topic of QE for text to text applications covering quality labels features algorithms evaluation uses and state of the art approaches It focuses on machine translation as application since this represents most of the QE work done to date It also briefly describes QE for several other applications including text simplification text summarization grammatical error correction and natural language generation **Text, Speech, and Dialogue** Kamil Ekštein,2019-09-02 This book constitutes the proceedings of the 22nd International Conference on Text Speech and Dialogue TSD 2019 held in Ljubljana Slovenia in September 2019 The 33 full papers presented in this volume were carefully reviewed and selected from 73 submissions They were organized in topical sections named text and speech The book also contains one invited talk in full paper length

Constraints in Discourse 3 Anton Benz,Manfred Stede,Peter Kühnlein,2012-10-17 The analysis of discourse is probably one of the most complex problems of linguistics It can be approached from many different directions involving a large variety of different methods This volume unites psycholinguistic studies investigations of logical and computational models of discourse corpus studies and linguistic case studies of language specific devices This variety of approaches reflects the complexity of discourse production and understanding and it also reflects the necessity of understanding the complex interplay of diverse parameters which influence these processes The growing importance of corpus based and experimental approaches to discourse analysis is duly reflected in this volume Most of the chapters make use of them in one or the other form This collection of articles grew out of the third installment of the Constraints in Discourse conferences and will be of interest to researchers from linguistics artificial intelligence and cognitive science **Linguistics and Language Behavior Abstracts** ,2006-10 **Proceedings of the Conference** Association for Computational Linguistics. Flammer,W. Kinzelbach,2000-04-01 Research on discourse or text processing has only recently come into its own It builds on the work of text analysis which has a long and distinguished history but modern developments in psychology e g memory research artificial intelligence linguistics and philosophy have contributed to this emergence in the last decade as a lively and promising research area This book contains 46 selected and edited contributions from the International Symposium held in Fribourg in 1981 and represents a truly

international overview of the developments in research on written and oral discourse The contributions have been grouped according to problem area and not according to methodology with the intention of focusing on the important issues in the field of discourse processing and of showing how diverse approaches contribute to a better understanding of the problems involved The main themes are text structure coherence inference memory processes attention and control goal perspectives and educational implications   **Linguistics** ,2005   Proceedings of the ... Discourse Processing Manfred Stede Introduction

In todays digital age, the availability of Discourse Processing Manfred Stede books and manuals for download has revolutionized the way we access information. Gone are the days of physically flipping through pages and carrying heavy textbooks or manuals. With just a few clicks, we can now access a wealth of knowledge from the comfort of our own homes or on the go. This article will explore the advantages of Discourse Processing Manfred Stede books and manuals for download, along with some popular platforms that offer these resources. One of the significant advantages of Discourse Processing Manfred Stede books and manuals for download is the cost-saving aspect. Traditional books and manuals can be costly, especially if you need to purchase several of them for educational or professional purposes. By accessing Discourse Processing Manfred Stede versions, you eliminate the need to spend money on physical copies. This not only saves you money but also reduces the environmental impact associated with book production and transportation. Furthermore, Discourse Processing Manfred Stede books and manuals for download are incredibly convenient. With just a computer or smartphone and an internet connection, you can access a vast library of resources on any subject imaginable. Whether youre a student looking for textbooks, a professional seeking industry-specific manuals, or someone interested in self-improvement, these digital resources provide an efficient and accessible means of acquiring knowledge. Moreover, PDF books and manuals offer a range of benefits compared to other digital formats. PDF files are designed to retain their formatting regardless of the device used to open them. This ensures that the content appears exactly as intended by the author, with no loss of formatting or missing graphics. Additionally, PDF files can be easily annotated, bookmarked, and searched for specific terms, making them highly practical for studying or referencing. When it comes to accessing Discourse Processing Manfred Stede books and manuals, several platforms offer an extensive collection of resources. One such platform is Project Gutenberg, a nonprofit organization that provides over 60,000 free eBooks. These books are primarily in the public domain, meaning they can be freely distributed and downloaded. Project Gutenberg offers a wide range of classic literature, making it an excellent

resource for literature enthusiasts. Another popular platform for Discourse Processing Manfred Stede books and manuals is Open Library. Open Library is an initiative of the Internet Archive, a non-profit organization dedicated to digitizing cultural artifacts and making them accessible to the public. Open Library hosts millions of books, including both public domain works and contemporary titles. It also allows users to borrow digital copies of certain books for a limited period, similar to a library lending system. Additionally, many universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable resources for students and researchers. Some notable examples include MIT OpenCourseWare, which offers free access to course materials from the Massachusetts Institute of Technology, and the Digital Public Library of America, which provides a vast collection of digitized books and historical documents. In conclusion, Discourse Processing Manfred Stede books and manuals for download have transformed the way we access information. They provide a cost-effective and convenient means of acquiring knowledge, offering the ability to access a vast library of resources at our fingertips. With platforms like Project Gutenberg, Open Library, and various digital libraries offered by educational institutions, we have access to an ever-expanding collection of books and manuals.
