Irrational Numbers Ivan Niven, 2005-08-18 In this monograph Ivan Niven provides a masterful exposition of some central results on irrational transcendental and normal numbers He gives a complete treatment by elementary methods of the irrationality of the exponential logarithmic and trigonometric functions with rational arguments The approximation of irrational numbers by rationals up to such results as the best possible approximation of Hurwitz is also given with elementary technique The last third of the monograph treats normal and transcendental numbers including the Lindemann theorem and the Gelfond Schneider theorem The book is wholly self contained The results needed from analysis and algebra are central Well known theorems and complete references to standard works are given to help the beginner The chapters are for the most part independent There are notes at the end of each chapter citing the main sources used by the author and suggesting further reading

Mathematical Problems Craig Smoryński, 2020-09-19 The life and soul of any science are its problems This is particularly true of mathematics which not referring to any physical reality consists only of its problems their solutions and most excitingly the challenges they pose Mathematical problems come in many flavours from simple puzzles to major open problems The problems stimulate the stories of their successful solutions inspire and their applications are wide The literature abounds with books dedicated to mathematical problems collections of problems hints on how to solve them and even histories of the paths to the solutions of some famous ones The present book aimed at the proverbial bright high school student takes a different more philosophical approach first dividing mathematical problems into three broad classes puzzles exercises and open problems and discussing their various roles in one's mathematical education Various chapters are devoted to discussing examples of each type of problem along with their solutions and some of the developments arising from them For the truly dedicated reader more involved material is offered in an appendix Mathematics does not exist in a vacuum whence the author peppers the material with frequent extra mathematical cultural references The mathematics itself is elementary for the most part pre calculus The few references to the calculus use the integral notation which the reader need not truly be familiar with opting to read the integral sign as strange notation for area or as

operationally defined by the appropriate buttons on his or her graphing calculator Nothing further is required Advance praise for Mathematical Problems There are many books on mathematical problems but Smoryski's compelling book offers something unique Firstly it includes a fruitful classification and analysis of the nature of mathematical problems Secondly and perhaps most importantly it leads the reader from clear and often amusing accounts of traditional problems to the serious mathematics that grew out of some of them John Baldwin University of Illinois at Chicago Smoryski manages to discuss the famous puzzles from the past and the new items in various modern theories with the same elegance and personality He presents and solves puzzles and traditional topics with a laudable sense of humor Readers of all ages and training will find the book a rich treasure chest Dirk van Dalen Universiteit Utrecht *The National Union Catalogs, 1963-1964* **Foundations of Differential Geometry** Shōshichi Kobayashi, Katsumi Nomizu, 1963 Notices of the American Mathematical Society American Mathematical Society, 1964 **Canadian Journal of Mathematics**, 1957 *University of California Union Catalog of Monographs Cataloged by the Nine Campuses from 1963 Through 1967: Authors & titles* University of California (System).
