Bayesian Meta-Analysis Robert Grant, Gian Luca Di Tanna, 2025-06-27 this book is extremely timely not just a technical exposition but provides practical guidance about using different software platforms as well as valuable advice about extracting summary statistics eliciting prior information communicating results visualisation and many other issues reflects years of thoughtful experience and should be of huge value to anyone faced with pooling studies into a coherent whole From the Foreword by Professor Sir David Spiegelhalter Meta analysis is the statistical combination of previously conducted studies often from summary statistics but sometimes with individual participant data It is widespread in life sciences and is gaining popularity in economics and beyond In many real life meta analyses challenges in the source information such as unreported statistics or biases can be incorporated using Bayesian methods Bayesian Meta Analysis A Practical Introduction provides an approachable introduction for researchers who are new to Bayes meta analysis or both There is an emphasis on hands on learning using a variety of software packages Key Features Introductory chapters assume no prior experience or mathematical training and are aimed at non statistical researchers Examples of basic meta analyses in seven different software alternatives BUGS JAGS Stan bayesmeta brms Stata and JASP Practical advice on extracting information from studies eliciting expert opinions managing project decisions and writing up findings Discussion of specific problems including publication bias unreported statistics and a mixture of study designs with code examples Accompanying online blog and forum with all code and data from the book plus more translations to different software This book aims to bridge the gap between the researcher who wants to carry out tailored meta analysis and the techniques they need which have previously been available only in mathematically or computationally demanding publications

**Measurement Invariance** Rens Van De Schoot, Peter Schmidt, Alain De Beuckelaer, 2015-10-05 Multi item surveys are frequently used to study scores on latent factors like human values attitudes and behavior Such studies often include a comparison between specific groups of individuals either at one or multiple points in time If such latent factor means are to be meaningfully compared the measurement structures including the latent factor and their survey items should be stable across groups and or over time that is invariant Recent developments in statistics have provided new analytical tools for assessing measurement invariance MI The aim of this special issue is to provide a forum for a discussion of MI covering some crucial themes 1 ways to assess and deal with measurement non invariance 2 Bayesian and IRT methods employing the concept of approximate measurement invariance and 3 new or adjusted approaches for testing MI to fit increasingly complex statistical models and specific characteristics of survey data The special issue started with a kick off meeting where all potential contributors shared ideas on potential papers This expert workshop was organized at Utrecht University in The Netherlands and was funded by the Netherlands Organization for Scientific Research NWO VENI 451 11 008 After the kick off meeting the authors submitted their papers all of which were reviewed by experts in the field The papers in the eBook are listed in alphabetical order but in

the editorial the papers are introduced thematically Although it is impossible to cover all areas of relevant research in the field of MI papers in this eBook provide insight on important aspects of measurement invariance We hope that the discussions included in this special issue will stimulate further research on MI and facilitate further discussions to support the understanding of the role of MI in multi item surveys      *Towards a Meaningful Instrumental Music Education.
