

The background of the book cover is a photograph of a sandy beach. A series of footprints leads from the bottom left towards the top right, where the ocean waves are breaking. The sky is a clear, pale blue.

Evidence And Evolution The Logic Behind The Science:

Evidence and Evolution Elliott Sober, 2008-03-27 How should the concept of evidence be understood And how does the concept of evidence apply to the controversy about creationism as well as to work in evolutionary biology about natural selection and common ancestry In this rich and wide ranging book Elliott Sober investigates general questions about probability and evidence and shows how the answers he develops to those questions apply to the specifics of evolutionary biology Drawing on a set of fascinating examples he analyzes whether claims about intelligent design are untestable whether they are discredited by the fact that many adaptations are imperfect how evidence bears on whether present species trace back to common ancestors how hypotheses about natural selection can be tested and many other issues His book will interest all readers who want to understand philosophical questions about evidence and evolution as they arise both in Darwin s work and in contemporary biological research

The Oxford Handbook of Philosophy of Science Paul Humphreys, Anjan Chakravartty, Margaret Morrison, Andrea Woody, 2016 This Handbook combines coverage of traditional areas in the philosophy of science such as causation explanation and theory structure with chapters on new areas such as philosophy of astronomy data complexity theory and emergence The articles are accessible to scientifically educated non philosophers as well as to philosophers

The Multiple Realization Book Thomas W. Polger, Lawrence A. Shapiro, 2016-09-01 Since Hilary Putnam offered multiple realization as an empirical hypothesis in the 1960s philosophical consensus has turned against the idea that mental processes could be identified with brain processes and multiple realization has become the keystone of the antireductive consensus across philosophy of science broadly Thomas W Polger and Lawrence A Shapiro offer the first book length investigation of multiple realization Their analysis of multiple realization serves as a starting point to a series of philosophically sophisticated and empirically informed arguments that cast doubt on the generality of multiple realization in the cognitive sciences In the course of making their case they respond to classic defenses of multiple realization that Jerry Fodor Ned Block and other prominent philosophers of psychology have offered Polger and Shapiro conclude that the identity theory once left for dead remains a viable theory of mind one that when suitably framed enjoys the benefits typically thought to accrue only to theories of mind that presuppose the truth of multiple realization As Polger and Shapiro see matters mind brain identities have played an important role in the growth and achievements of the cognitive sciences and they see little prospect or need for multiple realization in an empirically based theory of mind This leads Polger and Shapiro to offer an alternative framework for understanding explanations in the cognitive sciences as well as in chemistry biology and other non basic sciences

Ockham's Razors Elliott Sober, 2015-07-23 Ockham s razor the principle of parsimony states that simpler theories are better than theories that are more complex It has a history dating back to Aristotle and it plays an important role in current physics biology and psychology The razor also gets used outside of science in everyday life and in philosophy This book evaluates the principle and discusses its many applications Fascinating examples from different domains provide a rich

basis for contemplating the principle's promises and perils. It is obvious that simpler theories are beautiful and easy to understand; the hard problem is to figure out why the simplicity of a theory should be relevant to saying what the world is like. In this book the ABCs of probability theory are succinctly developed and put to work to describe two parsimony paradigms within which this problem can be solved.

Did Darwin Write the Origin Backwards? Elliott Sober, 2011. Is it accurate to label Darwin's theory the theory of evolution by natural selection given that the concept of common ancestry is at least as central to Darwin's theory? Did Darwin reject the idea that group selection causes characteristics to evolve that are good for the group though bad for the individual? How does Darwin's discussion of God in *The Origin of Species* square with the common view that he is the champion of methodological naturalism? These are just some of the intriguing questions raised in this volume of interconnected philosophical essays on Darwin. The author's approach is informed by modern issues in evolutionary biology but is sensitive to the ways in which Darwin's outlook differed from that of many biologists today. The main topics that are the focus of the book—common ancestry, group selection, sex ratio, and naturalism—have rarely been discussed in their connection with Darwin in such penetrating detail. Author Professor Sober is the 2008 winner of the Prometheus Prize. This biennial award, established in 2006 through the American Philosophical Association, is designed to honor a distinguished philosopher in recognition of his or her lifetime contribution to expanding the frontiers of research in philosophy and science. This insightful collection of essays will be of interest to philosophers, biologists, and laypersons seeking a deeper understanding of one of the most influential scientific theories ever propounded.
