Parkin-Smith,King's College London. School of Nursing and Midwifery,2010 Background Acute low back pain LBP is a major health problem that has a significant impact on healthcare resources Treatments for acute LBP have been tested in clinical trials and have been subject to systematic review Consequently clinical practice guidelines have been developed in which treatment recommendations are made However clinical guidelines are often not translated into practice and clinicians often to do adhere to them In addition treatment selection for acute LBP is influenced by practitioner or patient preference implying that not all treatment delivered is based on the best available scientific evidence Therefore there is needed to develop and test innovative approaches to the treatment of acute LBP in order to standardise and improve care alongside facilitating the translation of research into practice Aim This study set out to assess the short term effectiveness of a protocol of evidence based conservative care acceptable to practicing chiropractors and viable to use in chiropractic practice and compare it to usual chiropractic care for acute non specific LBP in chiropractic practice Methods Design Pragmatic pilot
