Evolutionary Biomechanics Oxford Series In Ecology And Evolution:

Evolutionary Biomechanics Graham Taylor, Adrian Thomas, 2014-01-02 Evolutionary biomechanics is the study of evolution through the analysis of biomechanical systems Its unique advantage is the precision with which physical constraints and performance can be predicted from first principles Instead of reviewing the entire breadth of the biomechanical literature a few key examples are explored in depth as vehicles for discussing fundamental concepts analytical techniques and evolutionary theory Each chapter develops a conceptual theme developing the underlying theory and techniques required for analyses in evolutionary biomechanics Examples from terrestrial biomechanics metabolic scaling and bird flight are used to analyse how physics constrains the design space that natural selection is free to explore and how adaptive evolution finds solutions to the trade offs between multiple complex conflicting performance objectives Evolutionary Biomechanics is suitable for graduate level students and professional researchers in the fields of biomechanics physiology evolutionary biology and palaeontology It will also be of relevance and use to researchers in the physical sciences and engineering Adaptation Michael R. Rose, George V. Lauder, 1996-09-22 The study of evolutionary adaptation returns to the center stage of biology with this important volume This innovative treatise discusses new developments in adaptation with new methods and new theoretical foundations achievements and prospects for a rich intellectual future It is an insightful reintroduction to the themes that Darwin and his successors regarded as central to any profound understanding of biology

Major Evolutionary Radiations Paul D. Taylor, Gilbert Powell Larwood, 1990 This unique volume takes a close look at patterns of evolutionary change responsible for the astounding diversity of life and the major radiations seen in many taxonomic groups Evidence from the fossil record shows that this process has not occurred at an even rate Rather relatively short but highly active periods of evolution have yielded the multiplication of species and morphological divergences such as the emergence of flowering plants during the late Cretaceous The contributors to this work all recognized authorities in their fields discuss general aspects of major radiations and then focus on evolution in taxonomic groups with ample fossil records The book is an important complement to the literature of extinction and paleontology and will be read with interest by paleontologists and evolutionary biologists alike **Paleobiology** ,1996 *A Companion to Dental Anthropology* Joel D. Irish, G. Richard Scott, 2020-12-22 Companion to Dental Anthropology presents a collection of original readings addressing all aspects and sub disciplines of the field of dental anthropology from its origins and evolution through to the latest scientific research Represents the most comprehensive coverage of all sub disciplines of dental anthropology available today Features individual chapters written by experts in their specific area of dental research Includes authors who also present results from their research through case studies or voiced opinions about their work Offers extensive coverage of topics relating to dental evolution morphometric variation and pathology **Journal of Experimental Biology** ,2006 **Fish Locomotion** Paolo Domenici, B.G. Kapoor, 2010-01-01 Fish accomplish most of their basic behaviors by swimming Swimming is fundamental in a

vast majority of fish species for avoiding predation feeding finding food mating migrating and finding optimal physical environments Fish exhibit a wide variety of swimming patterns and behaviors This treatise looks at fish swimming from the behavioral and *Canadian Journal of Zoology*, 2011 *Animal Signaling and Function* Duncan J. Irschick, Mark Briffa, Jeffrey Podos, 2014-12-01 The diversity of animal signals has been widely documented and the generality of animal signals also tantalizingly suggests that there are common mechanisms that have selected for their origin However while much progress has been made on some fronts we still lack a general theory about why the diversity of signaling structures exist Our compilation will directly address this gap by focusing on an exciting new arena of sexual selection namely using functional approaches to understand signaling This approach is rooted in the idea that many signals are designed to transmit important functional information that is both important for issues of male quality and hence male competition and female choice The increasing use of technology in sexual selection studies has enabled researchers to test whether signaling is either constrained by or accurately transmits information about functional capacities Further in animals that fight vigorously functional capacities such as endurance or strength may make the difference between winning and losing This volume brings together a diverse collection of researchers who are actively investigating how function and signaling are related These researchers use both a variety of methods and taxa to study animal signaling and we believe that this integrative view is important to open up fresh vistas for why animal signals have evolved **Journal of the Royal Society Interface**, 2007 *The American Naturalist*, 2006 **Guide** American Anthropological Association, 2008 *Journal of Mammalogy*, 1998 **Whitaker's Books in Print**, 1998 *Phenotypic Plasticity in House Mice Selectively Bred for High Voluntary Locomotor Activity* Scott Allen Kelly, 2008 *Patterns and Processes of Speciation in Ancient Lakes* Thomas Wilke, Risto Väinölä, Frank Riedel, 2009-04-02 Ancient lakes are exceptional freshwater environments that have continued to exist for hundreds of thousands of years They have long been recognized as centres of biodiversity and hotspots of evolution During recent decades speciation in ancient lakes has emerged as an important and exciting topic in evolutionary biology The contributions in this volume deal with patterns and processes of biological diversification in three prominent ancient lake systems Of these the famous East African Great Lakes already have a strong tradition of evolutionary studies but the two other systems have so far received much less attention The exceptional biodiversity of the European sister lakes Ohrid and Prespa of the Balkans has long been known but has largely been neglected in the international literature until recently The rich biota and problems of its evolution in the two central lake systems on the Indonesian island of Sulawesi in turn have only lately started to draw scientific attention This volume aims at deepening the awareness of the unusual biological diversity in ancient lakes in general and of the role of these lakes as natural laboratories for the study of speciation and diversification in particular It should stimulate further research that will lead to a better understanding of key evolutionary processes in these lakes and to knowledge that might help in mitigating the deterioration of their diversity in the future **Ecological and**
