The Chemical News and Journal of Physical Science ,1911 Chemical News and Journal of Physical Science ,1914 Planetary Protection Classification of Sample Return Missions from the Martian Moons European Science Foundation,European Space Sciences Committee,National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,Space Studies Board,Committee on Planetary Protection Requirements for Sample Return Missions from Martian Moons,2019-06-20 An international consensus policy to prevent the biological cross contamination of planetary bodies exists and is maintained by the Committee on Space Research COSPAR of the International Council for Science which is consultative to the United Nations Committee on the Peaceful Uses of Outer Space Currently COSPAR s planetary protection policy does not specify the status of sample return missions from Phobos or Deimos the moons of Mars

Although the moons themselves are not considered potential habitats for life or of intrinsic relevance to prebiotic chemical evolution recent studies indicate that a significant amount of material recently ejected from Mars could be present on the surface of Phobos and to a lesser extent Deimos This report reviews recent theoretical experimental and modeling research on the environments and physical conditions encountered by Mars ejecta during certain processes It recommends whether missions returning samples from Phobos and or Deimos should be classified as restricted or unrestricted Earth return in the framework of the planetary protection policy maintained by COSPAR This report also considers the specific ways the classification of sample return from Deimos is a different case than sample return from Phobos Jahangirnagar University Journal of Science ,2014

Corporate Power and Human Rights Manette Kaisershot,Nicholas Connolly,2018-02-02 There is ample evidence about the negative effects business activity of all types can have on the provision of human rights Equally there can be little doubt economic development usually driven through business activity and trade is necessary for any state to provide the institutions and infrastructure necessary to secure and provide human rights for their citizens The United Nations and businesses recognise this tension and are collaborating to effect change in business behaviours through voluntary initiatives such as the Global Compact and John Ruggie s Guiding Principles Yet voluntary approaches are evidently failing to prevent human rights violations and there are few alternatives in law for affected communities to seek justice This book seeks to robustly challenge the current status quo of business approaches to human rights in order to develop meaningful alternatives in an attempt to breach the gap between the realities of business and human rights and its discourse This book was previously published as a special issue of the International Journal of Human Rights Scientific Papers of the Institute of Physical and Chemical Research ,1925 Canadian Journal of Physics ,2014 Radiation Belt Dynamics: Theory, Observation and Modeling Qianli Ma,Xinliang Gao,Dedong Wang,2024-12-12 The radiation belts of the Earth and other magnetized planets are populated by relativistic particles which are highly dynamic due to various source and loss processes Although the Earth s intrinsic magnetic fields trap charged particles the satellite observations revealed that the outer radiation belt fluxes are strongly affected by solar wind and geomagnetic activities The direct drivers of the radiation belt variability are radial diffusion due to ultra low frequency waves and local wave particle interactions due to whistler mode waves electron cyclotron waves and ion cyclotron waves Quasilinear and nonlinear theories were developed to demonstrate and quantify the importance of each process in the radiation belt dynamics Numerical simulations generally reproduce the overall source and loss of radiation belt particles but detailed quantification of the observed features is challenging Machine learning technique is proved as a useful tool in reproducing and forecasting the particle fluxes in radiation belts
