**Critical Role of Animal Science Research in Food Security and Sustainability** National Research Council, Division on Earth and Life Sciences, Board on Agriculture and Natural Resources, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Considerations for the Future of Animal Science Research, 2015-03-31 By 2050 the world's population is projected to grow by one third reaching between 9 and 10 billion. With globalization and expected growth in global affluence, a substantial increase in per capita meat, dairy, and fish consumption is also anticipated. The demand for calories from animal products will nearly double, highlighting the critical importance of the world's animal agriculture system. Meeting the nutritional needs of this population and its demand for animal products will require a significant investment of resources as well as policy changes that are supportive of agricultural production. Ensuring sustainable agricultural growth will be essential to addressing this global challenge to food security. **Critical Role of Animal Science Research in Food Security and Sustainability** identifies areas of research and development, technology, and resource needs for research in the field of animal agriculture, both nationally and internationally. This report assesses the global demand for products of animal origin in 2050 within the framework of ensuring global food security, evaluates how climate change and natural resource constraints may impact the ability to meet future global demand for animal products in sustainable production systems, and identifies factors that may impact the ability of the United States to meet demand for animal products, including the need for trained human capital, product safety and quality, and effective communication and adoption of new knowledge, information, and technologies. The agricultural sector worldwide faces numerous daunting challenges that will require innovations, new technologies, and new ways of approaching agriculture if the food, feed, and fiber needs of the global population are to be met. The recommendations of **Critical Role of Animal Science Research in Food Security and Sustainability** will inform a new roadmap for animal science research to meet the challenges of sustainable animal production in the 21st century. **Catalog of Federal Domestic Assistance**, 1969 Identifies and describes specific government assistance opportunities such as loans, grants, counseling, and procurement contracts available under many agencies and programs. **UNESCO Science Report** UNESCO, 2021-06-18 *Agricultural Science*, 1889 *Commodity Trade and Finance* Michael Tamvakis, 2015-04-10 What affects the supply of oil? This unique book analyses the economics of key commodity groups including energy, agriculture, and metals. It examines the supply, demand, fundamentals of several major and minor commodities, physical characteristics, production and consumption patterns, trade flows, and pricing mechanisms. It also explains the main tools used to hedge price risk, such as futures, options, and swaps. This second edition has been fully revised and restructured and contains four new chapters including oil refining, electricity, and price risk management for energy, metals, and agricultural commodities.
