Holroyd-Leduc, Madhuri Reddy, 2012 The latest addition to the Evidence Based Book series Evidence Based Geriatric Medicine provides non geriatrician clinicians an overview of key topics central to the care of the older patient This guide focuses on the management of common problems in the elderly taking into account their life situations as well as treatment of specific conditions **Geriatric Medicine** Michael R. Wasserman, Debra Bakerjian, Sunny Linnebur, Sharon Brangman, Matteo Cesari, Sonja Rosen, 2024-02-19 Both volumes sold as a combined set for a one time purchase Older adults represent the most rapidly growing demographic in the U S and in many developed countries around the world The field of geriatric medicine is still relatively young and is only recently seeing a significant increase in peer reviewed literature Medicare and Medicaid expenditures related to older adults are nearly a trillion dollars year in the US How our healthcare system cares for older adults and how those older adults navigate an increasingly complex system is of the utmost importance According to the Institute of Medicine physicians and other healthcare professionals receive an inadequate amount of training in geriatric medicine Geriatric medicine is based on the concept of delivering person centered care with a focus on function and quality of life It is essential that physicians nurse practitioners physician assistants pharmacists social workers and other health care professionals all be knowledgeable about the geriatric approach to care Geriatric medicine varies from most other fields in medicine While many specialties function on the basis of evidence based literature geriatricians and other clinicians caring for older adults must integrate relatively limited evidence with variable physiological changes and complex psychosocial determinants Geriatricians are used to caring for 90 year olds with multiple chronic illnesses Their variable physiology leads to uncertain responses to pharmacotherapy and their personal goals and wishes need to be incorporated into any plan of care Practicing geriatric medicine requires the ability to see patterns But it goes one step further as the rules are constantly in flux Every patient is an individual with particular needs and goals In order to provide true person centered care to older adults one has to incorporate these factors into the decision making process The proposed handbook is designed to present a comprehensive and state of the art update that incorporates existing literature with clinical experience Basic science and the physiology of aging create a background but are not the main focus This is because every chapter has been written through the lens of person centered care This book is about focusing on what

matters to the person and how that is not always about pathology and physiology The reader generally will not find simple solutions to symptoms diseases and syndromes In fact the key to caring for geriatric patients is the ability to think both critically and divergently at the same time Geriatrics encompasses multiple disciplines and spans all of the subspecialties It requires knowledge of working within an interdisciplinary team It requires an appreciation of how quality of life varies with each individual and creates treatment and care plans that also vary And most of all it requires a firm commitment to first learning who the person is so that all of the necessary data can be analyzed and integrated into a true person centered plan of care This book aims to serve as an unparalleled resource for meeting these challenges Updated and revised from the previous edition this text features over 40 new peer reviewed chapters new references and a wide array of useful new tools that are updated on a regular basis by interdisciplinary and interprofessional experts in geriatric medicine Geriatric Medicine Frank Lally,Christine Roffe,2014 Geriatric Medicine is a clinical reference for health care professionals who manage older patients It summarizes up to date research literature in a style that can be directly applied by busy healthcare professionals and provides a useful resource for reference **Evidence-Based Geriatric Nursing Protocols for Best Practice** Marie Boltz,2012 Print CourseSmart Geriatric Medicine Christine K. Cassel,Rosanne Leipzig,Harvey Jay Cohen,Eric B. Larson,Diane E. Meier,2006-05-29 Since the publication of the third edition of Geriatric Medicine extraordinary advances have occurred in the science of aging and the potential for biomedical research to give us answers to many if not most of the age related disorders that threaten the quality of life in older years At the most basic level the successful mapping of the human genome was declared complete in the fall of 2000 Understanding the map of the human genome is as important as understanding the map of genomes of important laboratory species ranging from the microscopic worms and fruit flies used in most classic genetic studies to rodents such as laboratory mice and eventually to primates on which much of the research on the aging human brain is done The genetic maps of all of these species including our own does not answer clinical questions but it does open the door to dramatic rapid and efficient answers to questions about the genetic polymorphisms related to diseases in humans The telomerase story also unfolded since the third edition Telomerase is an enzyme responsible for maintaining the telomeres the redundant DNA portions at the end of chromosomes whose shortening seems to be linked directly to cell senescence apoptosis and the control over cell death which at the level of the individual cell seems to be linked to the decline of organ function and eventually aging and death within the organism

Soriano, 2007-05-26 Prior to the evolution of modern medicine with its superabundance of diagnostic and therapeutic medical technology and the rise of the litigious society the value of clinical skills was evident in both history taking and the physical examination Even today physicians can make a correct diagnosis solely by utilizing their clinical skills in about 90% of patient encounters Furthermore in the past physicians understood their role as a psychologist and were more apt to be familiar with the social context of their patients House calls were common The doctor was also a placebo who at his best inspired hope and probably sped recovery Geriatricians use both clinical skills and take advantage of modern technology sparingly for they know they are dealing with the most challenging and frail of patients older patients who so often present with multiple complex interacting behavioral social and physical problems In contrast to medicine for young people working with the older patient is much more demanding Furthermore the complex issue of societal attitudes toward old people can come into play specifically the physician's need to deal with natural fears of aging dependency depression dementia and death Ageism is the enemy of effective medical treatment At its best geriatrics exemplifies ways that medical care for all ages can become more humane problem oriented and holistic **Handbook of Gerontology** James A.
