Evolution Of Life Histories Evolution Of Life Histories:

Evolution Of Life Histories Derek Roff, 1993-05-31 There are many different types of organisms in the world they differ in size physiology appearance and life history The challenge for evolutionary biology is to explain how such diversity arises The Evolution of Life Histories does this by showing that natural selection is the principal underlying force molding life history variation The book describes in particular the ways in which variation can be analyzed and predicted It covers both the genetic and optimization approaches to life history analysis and gives an overview of the general framework of life history theory and the mathematical tools by which predictions can be made and tested Factors affecting the age schedule of birth and death and the costs of reproduction are discussed The Evolution of Life Histories concentrates on those theoretical developments that have been tested experimentally It will interest both students and professionals in evolution evolutionary ecology mathematical and theoretical biology and zoology and entomology Evolution and Genetics in Life Histories Hugh

Dingle, J. P. Hegmann, 2013-07-11 This volume is the result of a symposium entitled Variation in Life Histories Genetics and Evolutionary Processes sponsored by the Program in Evolutionary Ecology and Behavior of the University of Iowa and held in Iowa City on October 13 and 14 1980 Prompted by a recent upsurge of interest in the evolution of life histories we chose this topic because of the obvious association between life history traits and Darwinian fitness If such an association were to be fruitfully investigated it would require the closer cooperation of population and evolutionary ecologists and quantitative and population geneticists To encourage such an association our symposium had four major aims first to facilitate intellectual exchange across disciplines among an array of biologists studying life histories second to encourage exploration of genetic variance and covariance for life history traits third to consider the ecological background for genetic variability and finally to facilitate a comparative overview both within and among species Obviously such broad aims cannot be met totally in a single volume but we think we have succeeded reasonably well in providing a representative and nourishing intellectual feast We see this book as a stimulus to the coordination of future efforts in an important and expanding area of inquiry We have divided the book into six sections *Evolution and Genetics of Life Histories* Hugh Dingle, Joseph P.

Hegmann, 2013-09-03 **Life History Evolution** Derek A. Roff, 2002 Life History Evolution represents a synthetic approach to the understanding of the evolution of life history variation using the three types of environment constant stochastic predictable as the focus under which the theory is developed and tested First the author outlines a general framework for the study and analysis of life history variation bringing together the approaches of quantitative genetic modeling and optimality analysis Using this framework he then discusses how life histories evolve in the three different types of environments each of which presents unique characteristics The theme of the book is that an understanding of evolutionary change requires analysis at both the genetic and phenotypic levels and that the environment plays a central role in such analyses Intended for graduate students and researchers the book's emphasis is on assumptions and testing of models Mathematical processes are

described but mathematical derivations are kept to a minimum Each chapter includes a summary and boxes provide supplementary material

The Evolution of Life Histories Stephen C. Stearns, 2004 *Life History Evolution* Michal Segoli, Eric Wajnberg, 2024-12-27 Provides a timely and authoritative account of Life History Evolution by a multidisciplinary team of scholars and researchers from around the world Life History Evolution Traits Interactions and Applications presents a cutting edge synthesis of the mechanisms driving life history strategies that span the breadth of taxa from bacteria to humans Integrating classical and contemporary perspectives this comprehensive volume addresses how organisms evolve traits in response to diverse ecological pressures Editors Michal Segoli and Eric Wajnberg bring together leading experts to explore the intersection of evolutionary biology ecology and applied research focusing on the evolving complexity of life history traits and their implications In depth yet accessible chapters cover a broad spectrum of life history traits from classical traits of lifespan and reproduction to more complex interactions like social behaviour predator prey dynamics and human induced evolutionary processes The contributing authors explain essential concepts identify critical knowledge gaps discuss future research directions and demonstrate the relevance of life history evolution in addressing climate change species invasion pollution and more Providing a well balanced understanding of life history traits and their implications Life History Evolution Incorporates recent advances in evolutionary theory including eco evolutionary feedback loops and anthropogenic impacts Offers diverse perspectives and original research from leading experts in fields such as evolutionary biology ecology entomology zoology agriculture and veterinary medicine Discusses life history evolution in the context of co evolved interactions such as predator prey parasite host plant herbivore and endosymbiont host relationships Provides an overview of the foundational theory recent developments and current thinking in the field Features numerous case studies that highlight real world applications in biological control wildlife management climate change adaptation and others Revealing how life history traits shape the evolutionary strategies of organisms Life History Evolution Traits Interactions and Applications is an essential resource for undergraduate and graduate students researchers industry professionals and policymakers in ecological science It is an ideal textbook for courses in evolutionary ecology evolutionary biology conservation biology environmental science and environmental management

Life Histories Martin Thiel, Gary A. Wellborn, 2018-05-22 Crustaceans are increasingly being used as model organisms in all fields of biology including neurobiology developmental biology animal physiology evolutionary ecology biogeography and resource management Crustaceans have a very wide range of phenotypes and inhabit a diverse array of environments ranging from the deep sea to high mountain lakes and even deserts The evolution of their life histories has permitted crustaceans to successfully colonize this variety of habitats Few other taxa exhibit such a variety of life histories and behavior A comprehensive overview of their life histories is essential to the understanding of many aspects of their success in marine and terrestrial environments This volume provides a general overview of crustacean life histories Crustaceans have particular life history adaptations that have

permitted them to conquer all environments on earth Crustacean life cycles have evolved to maximize fecundity growth and ageing in a wide range of environmental conditions Individual contributions contrast benefits and costs of different life histories including sexual versus asexual production semelparity versus iteroparity and planktonic larvae versus direct development Important aspects of particular behaviors are presented e g migrations defense and territorial behaviors anti predator behavior symbiosis

The Evolution of Life Histories Stephen C. Stearns, 1992 A Primer of Life Histories Jeffrey Alexander Hutchings, 2021 This accessible primer encompasses the basic concepts theories and applied elements of life history evolution Encyclopedia of Ecology and Environmental Management, 2009-07-15 The Encyclopedia of Ecology and Environmental Management addresses the core definitions and issues in pure and applied ecology It is neither a short entry dictionary nor a long entry encyclopedia but lies somewhere in between The mixture of short entry definitions and long entry essays gives a comprehensive and up to date alphabetical guide to over 3000 topics and allows any subject to be accessed to varying levels of detail while the longer entries provide general reviews of subjects the short definitions provide specific details on more specialised areas An important feature of the Encyclopedia which sets it apart from other similar works is the comprehensive cross referencing The most comprehensive and up to date reference work in pure and applied ecology Definitions cover the entire spectrum of pure and applied ecological research Distinguished editorial board Dr Peter Moore Professor John Grace Professor Bryan Shorrocks Professor Steven Stearns Professor Don Falk International team of distinguished authors over 200 contributors from 20 countries 3000 headwords defined Over 250 long entries review major topics Heavily illustrated with a section of colour plates Complete one volume guide to pure and applied ecology Presents cutting edge definitions in emerging fields as well as grounding in well established areas of ecology Insect Life History Patterns R. Aiken, S. L. Waddy, Gérard Y. Conan, 1995 Life History Evolution in Plants Timo Olavi Vuorisalo, P. Mutikainen, 2001-12-14 The lack of discussion of the life histories of modular organisms is the weakness of this book that I most regret Modular organisms are different S C Stearns The Evolution of Life Histories 1992 Life history theory endeavours to increase our understanding of the processes whereby the broad features of the life cycles of organisms such as the timing and magnitude of reproduction have evolved Although reproductive traits have dominated as study objects due to their immediate importance for evolutionary success much work has also been conducted on patterns of development growth and senescence as well as on the shifts in resource allocation related to these processes The basic axiom of life history theory is that patterns of life histories such as reproductive traits are subject to evolutionary explanation This idea can be traced back at least as far as Darwin's Origin of Species 1859 In his discussion of plant domestication Darwin wrote I cannot doubt that the continued selection of slight variations either in the leaves the flowers or the fruit will produce races differing from each other chiefly in

these characters Darwin was impressed by the success of plant breeders in moulding the growth and reproductive parameters of cultivated plants and believed that natural selection could have a similar impact in natural populations

Evolutionary Biology Max Hecht, 2012-12-06 Evolutionary Biology of which this is the nineteenth volume continues to offer its readers a wide range of original articles reviews and commentaries on evolution in the broadest sense of that term The topics of the reviews range from anthropology and behavior to molecular biology and systematics In recent volumes a broad spectrum of articles have appeared on such subjects as natural selection among replicating molecules in vitro mate recognition and the reproductive behavior in *Drosophila* evolution of the monocotyledons species selection and the communication network made possible among even distantly related genera of bacteria by plasmids and other transposable elements Articles such as these often too long for standard journals are the stuff of Evolutionary Biology The editors continue to solicit manuscripts on an international scale in an effort to see that everyone of the many facets of biological evolution is covered Manuscripts should be sent to anyone of the following Max K Hecht Department of Biology Queens College of the City University of New York Flushing New York 11367 Bruce Wallace Department of Biology Virginia Polytechnic Institute and State University Blacksburg Virginia 24061 Ghillian T Prance New York Botanical Garden Bronx New York 10458 The Editors vII Contents 1 Discontinuous Processes in the Evolution of the Bacterial Genome 1 Monica Riley Introduction 1 Internal Rearrangements 2 Large Scale Internal Rearrangements 2 Small Scale Rearrangements Divergence of Duplicate Genes 11 Interactions between Two Genomes 20 Transposons Jumping Genes 20 Plasmids Incorporation into Genomic DNA 23

Handbook of Cognitive Archaeology Tracy B. Henley, Matt J. Rossano, Edward P. Kardas, 2019-07-24 The remains that archaeologists uncover reveal ancient minds at work as much as ancient hands and for decades many have sought a better way of understanding those minds This understanding is at the forefront of cognitive archaeology a discipline that believes that a greater application of psychological theory to archaeology will further our understanding of the evolution of the human mind Bringing together a diverse range of experts including archaeologists psychologists anthropologists biologists psychiatrists neuroscientists historians and philosophers in one comprehensive volume this accessible and illuminating book is an important resource for students and researchers exploring how the application of cognitive archaeology can significantly and meaningfully deepen their knowledge of early and ancient humans This seminal volume opens the field of cognitive archaeology to scholars across the behavioral sciences

from the One tailed test to Zoocoenosis the Blackwell Concise Encyclopedia of Ecology provides concise non technical definitions of over 2000 ecological terms covering the complete spectrum of pure and applied ecological research The definitions are drawn from the Encyclopedia of Ecology and Environmental Management and are fully cross referenced This is the most comprehensive and up to date dictionary of ecological terms available It should be invaluable to students and researchers alike Over 2000 terms defined Avoids technical jargon Fully cross referenced Includes common abbreviations

Life Histories of Animals, Including Man; Or, Outlines of Comparative Embryology Alpheus Spring PACKARD (the Younger.),1876 The Evolution of Human Life History Kristen Hawkes,Richard R. Paine,2006 Human beings may share 98 percent of their genetic makeup with their nonhuman primate cousins but they have distinctive life histories When and why did these uniquely human patterns evolve To answer that question this volume brings together specialists in hunter gatherer behavioral ecology and demography human growth development and nutrition paleodemography human paleontology primatology and the genomics of aging The contributors identify and explain the peculiar features of human life histories such as the rate and timing of processes that directly influence survival and reproduction Drawing on new evidence from paleoanthropology they question existing arguments that link human s extended childhood dependency and long post reproductive lives to brain development learning and distinctively human social structures The volume reviews alternative explanations for the distinctiveness of human life history and incorporates multiple lines of evidence in order to test them
