tattoos There is a wide variety in the resilience of tattoo inks as well Tattoo inks consist of simple carbon particles The carbon base usually comes from burnt wood cotton vegetables India or pen ink and plastic Professional artists have access to more than 100 different colors Ink manufacturers are not required to list the composition of their products so tattoo artists may not know the base of their chosen ink Nevertheless plastic based inks are heavily marketed for their relative colorfastness and permanence Unfortunately plastic based inks are also more likely to cause allergic reactions Though there was no documented study available at the writing of this article it makes sense that the technological advances in skin care could be beneficial to prolonging the life of your tattoo The age fighting trend is enormously popular in the cosmetic industry these days Virtually every major brand is getting in on it There are all kinds of products claiming to lift firm and unwrinkled the skin Some of them even claim to slow down stop or even reverse the aging process Most of them really do work to some degree If it makes the skin on your face look better why wouldn't it make your tattoo look better as well
