Faithscience Why Science Needs Faith In The Twenty First Century:

Faith @ Science Denyse O'Leary, 2001 Our moral problems are not solved by faster machines At the turn of the twentieth century many thinkers were convinced that there was a scientific answer to all the problems that plague human existence As we stand at the beginning of the twenty first century we can see that the same technology that produced the factory produced the extermination camp The same technology that increases production threatens to cause global environmental disaster We face greater conundrums than ever How should we decide How should we live Journalist Denyse O Leary provides a witty entertaining defence of a Christian perspective on this world and our place in it **The Future of Reason, Science and Faith** Revd Dr J Andrew Kirk, 2013-05-28 Focusing on the history of ideas this book explores important questions concerning knowledge in relation to philosophy science ethics and Christian faith Kirk contributes to the current debate about the intellectual basis and integrity of Western culture exploring controversial issues concerning the notions of modernity and post modernity Repositioning the Christian faith as a valid dialogue partner with contemporary secular movements in philosophy and ethics Kirk seeks to show that in post Christian Europe the Christian faith still possesses intellectual resources worthy to be reckoned with This book's principal argument is that contemporary Western society faces a cultural crisis It explores what appears to be an historical enigma namely the question of why Western intellectual endeavours in philosophy and science seem to have abandoned the search for a source of knowledge able to draw together disparate pieces of information provided by different disciplines Kirk draws conclusions particularly in the area of ethical decision making from this apparent failure and invites readers to consider Christian theism afresh as a means for the renewal of culture and society Has Science Killed God? Loftus, 2016-07-26 This anthology of new critical essays written by experts in their fields in honor of the late Victor Stenger examines Christianity using established scientific criteria

Where science specifically touches upon the claims of Christianity the authors seek to show those claims lack the required evidence The result is that Christianity is not a sufficiently evidenced religion In his New York Times bestseller *God The Failed Hypothesis* physicist Victor Stenger argued that claims of religion should be subject to the same standards of scientific rigor as any other truth claim Taking this approach the contributors argue that Christianity fails every known scientific test for truth Stenger himself wrote a chapter for this volume before he died In it he presents a brief history of ideas about cosmology showing that Christianity's premodern understanding of the cosmos is incompatible with current scientific evidence regarding the origin and structure of the cosmos Other contributors examine a wide variety of topics including biblical archaeology Intelligent Design the Shroud of Turin free will the existence of the soul the efficacy of petitionary prayer and more This challenging work is indispensable reading for both skeptical readers and open minded people of faith
